

Introducción a JavaScript

Hicimos una carpeta nueva, la abrimos en JavaScript, la nombramos index.html y luego, en 1 escribimos html, escogemos el que dice html: 5 y nos aparece el código solito.

En body escribimos lo siguiente

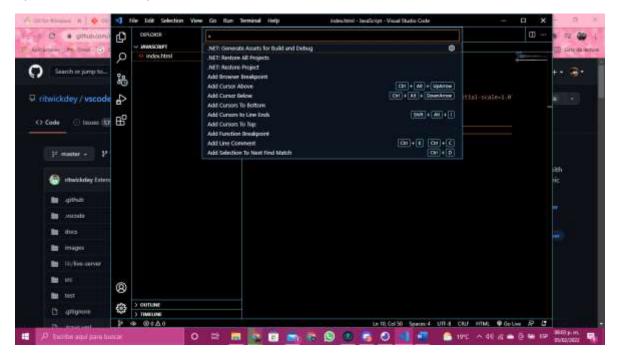

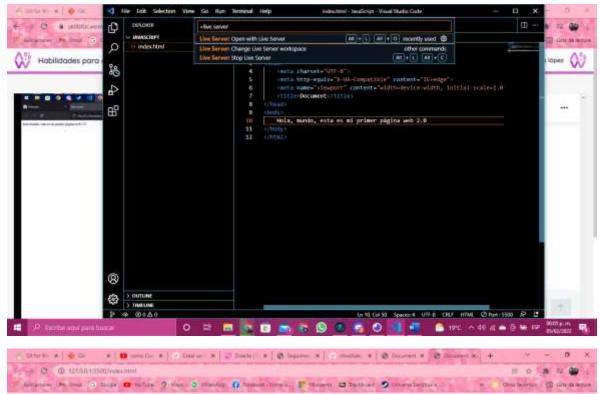

Instalamos Live Server

Apretamos la tecla f1 y nos salen los comandos

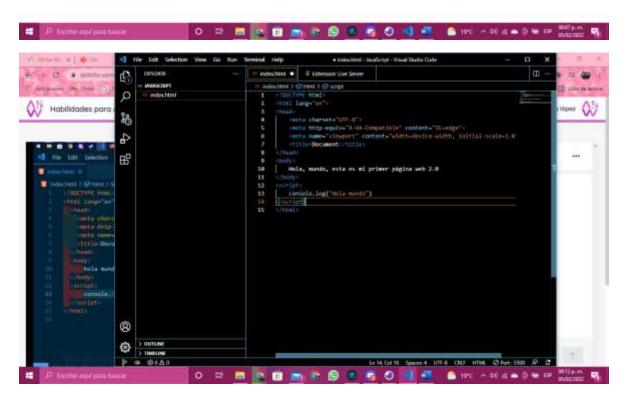

Hola, mundo, esta es mi primer página web-2.0

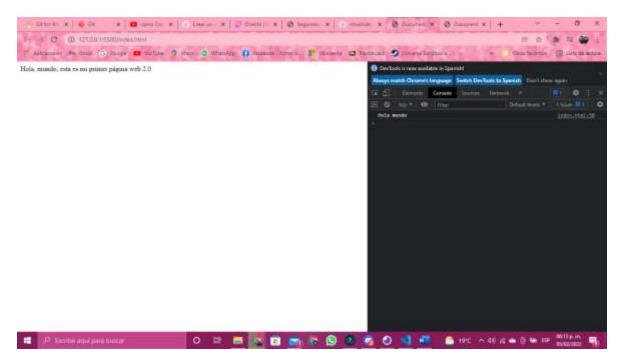

Escribimos en el navegador

Localhost:5500

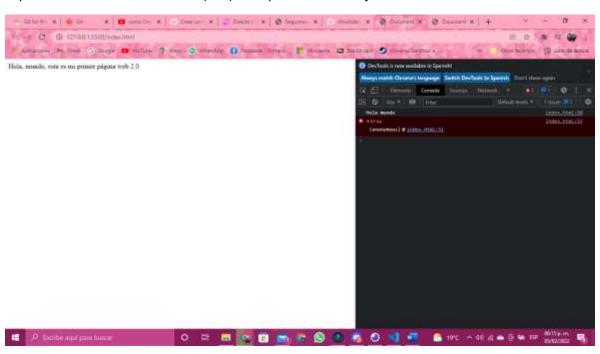

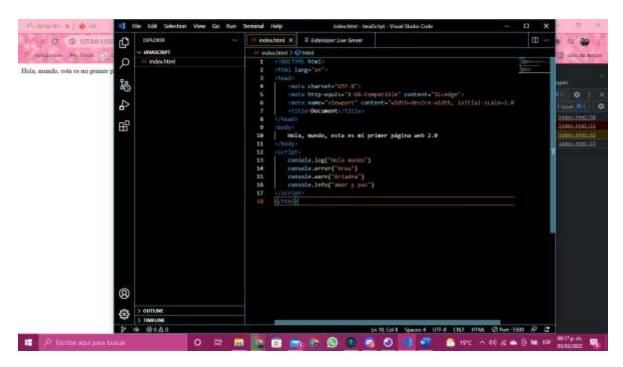

Abro mi navegador, le doy click derecho e inspeccionar y checo la consola

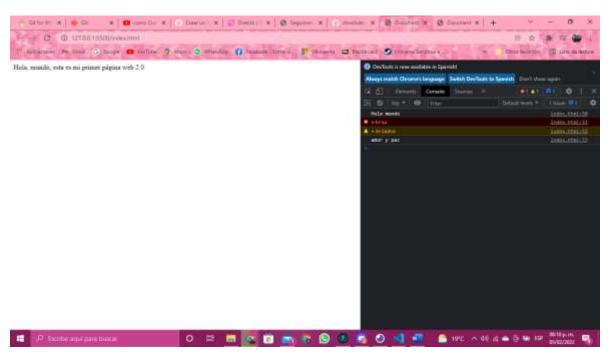

Si ponemos en VSC console.error("") nos aparece el mensaje como si fuera un error

Ponemos estos para visualizarlos

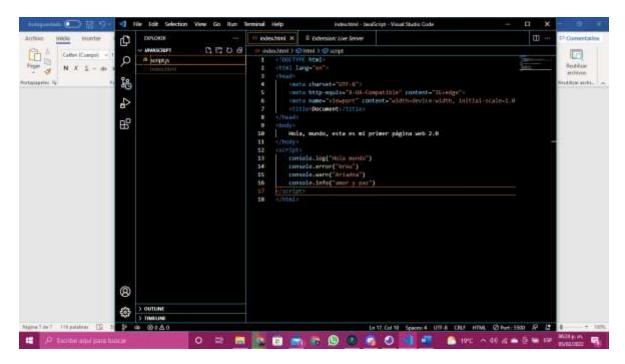

Se ven así

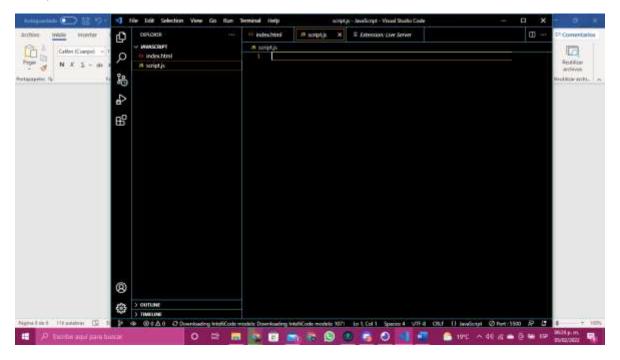

No nos sale el iconito de info

Tenemos que separar siempre javascript de html, así que agregamos otro archivo que se llame script.js

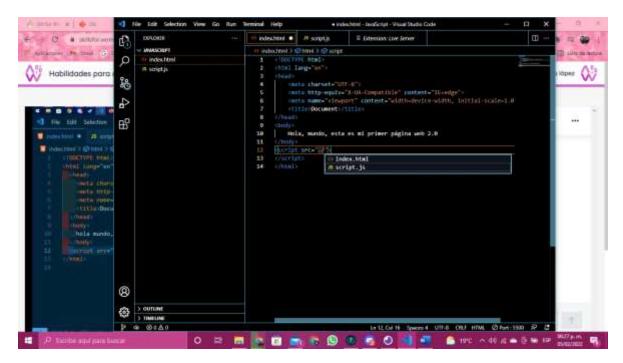

Nos queda así

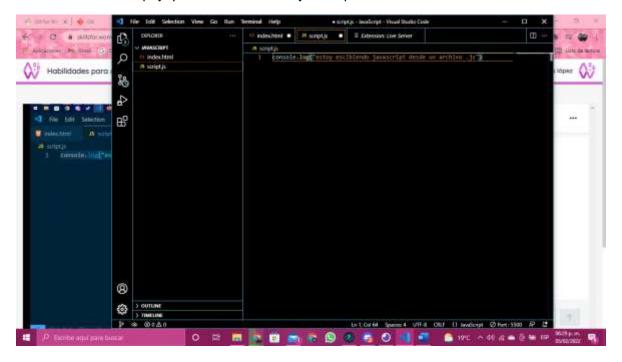

Escribimos en html lo siguiente

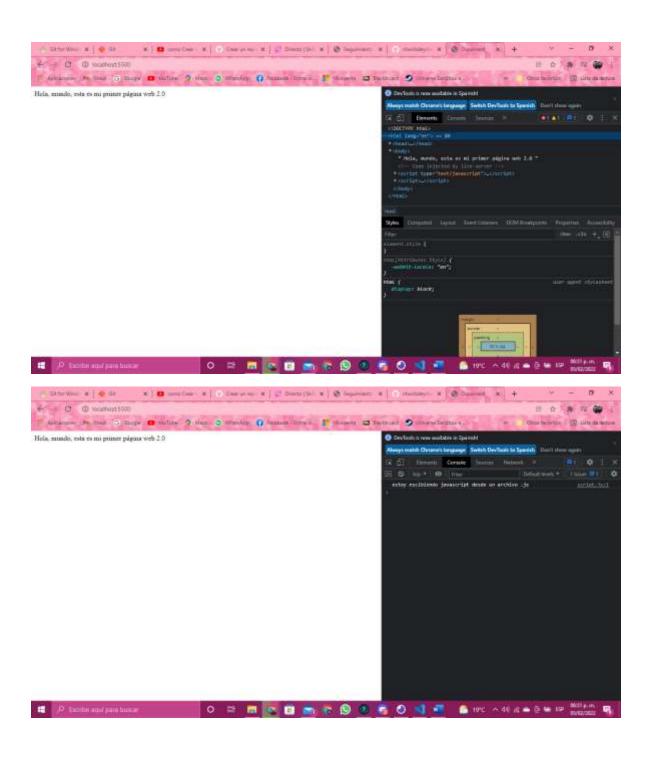

<script src="./script.js"></script>

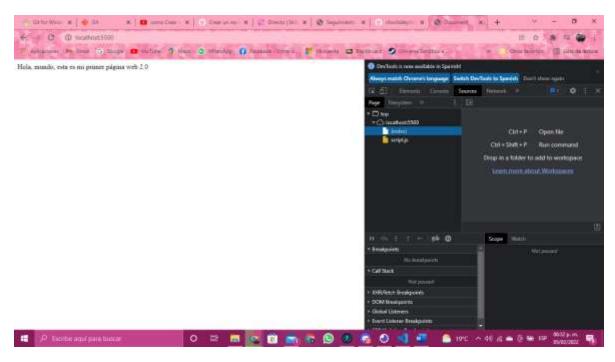

Seleccionamos el script.js y vamos a escribir en javascript

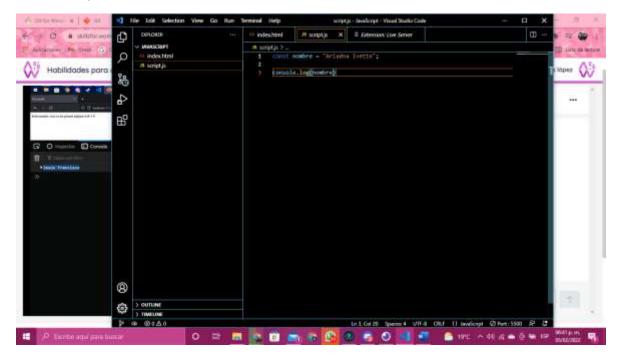

Aparece así en el navegador

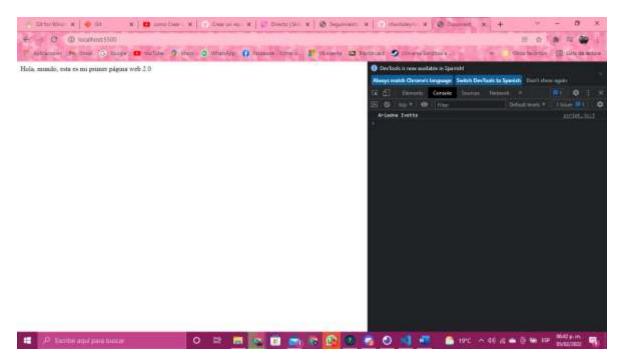

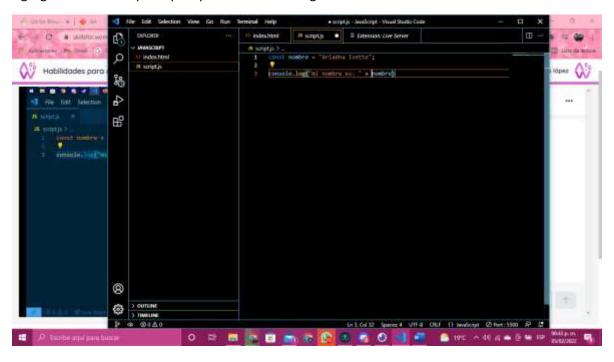

Constantes y variables

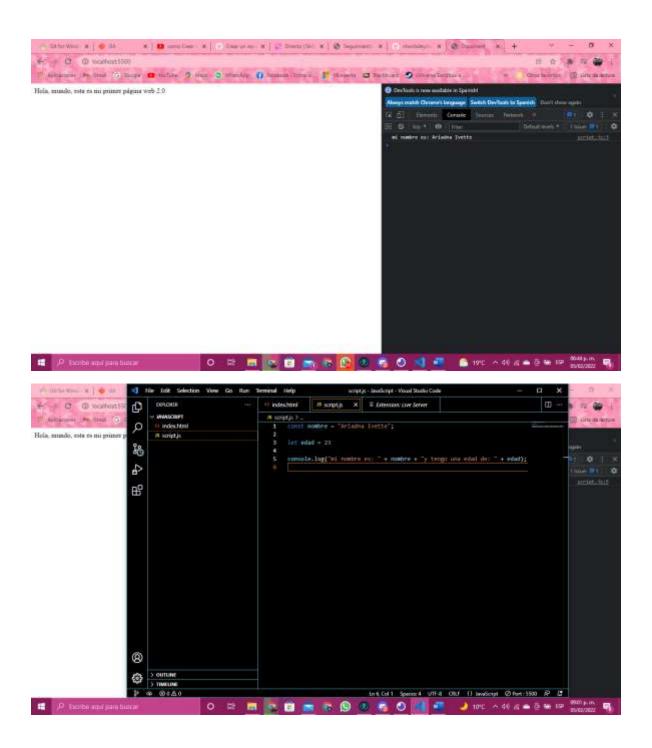

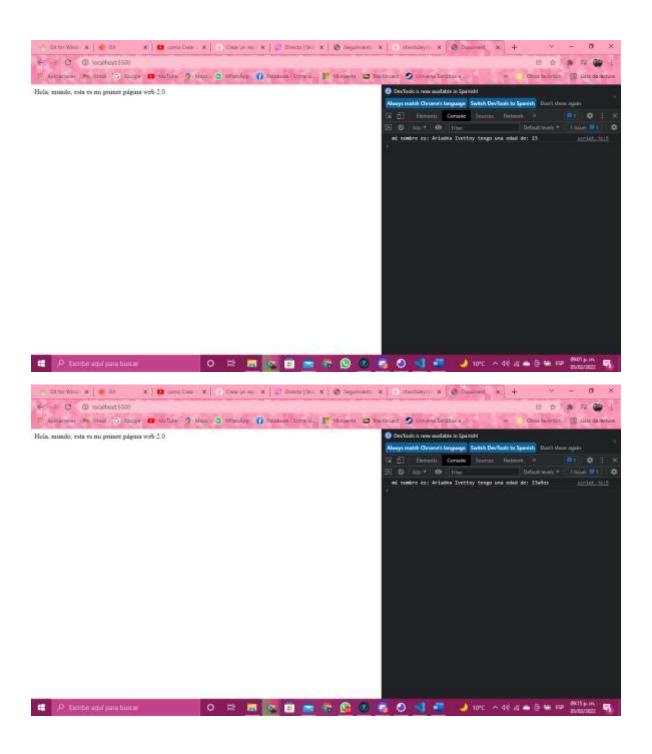

Le damos ctrl+S para guardar y vemos en el navegador

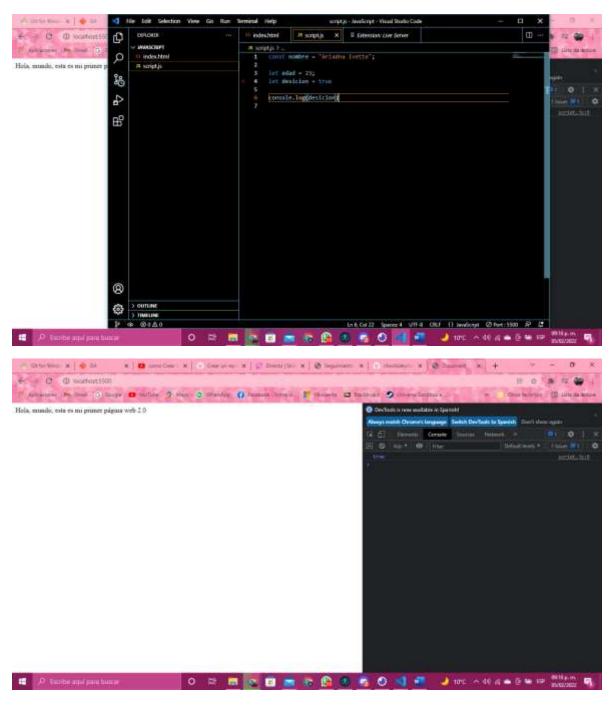

Agregamos un texto para que aparezca en el navegador

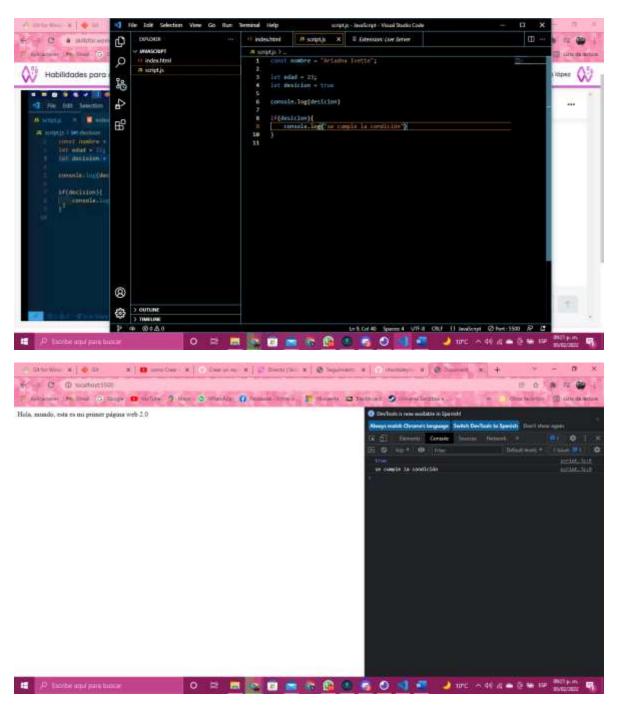

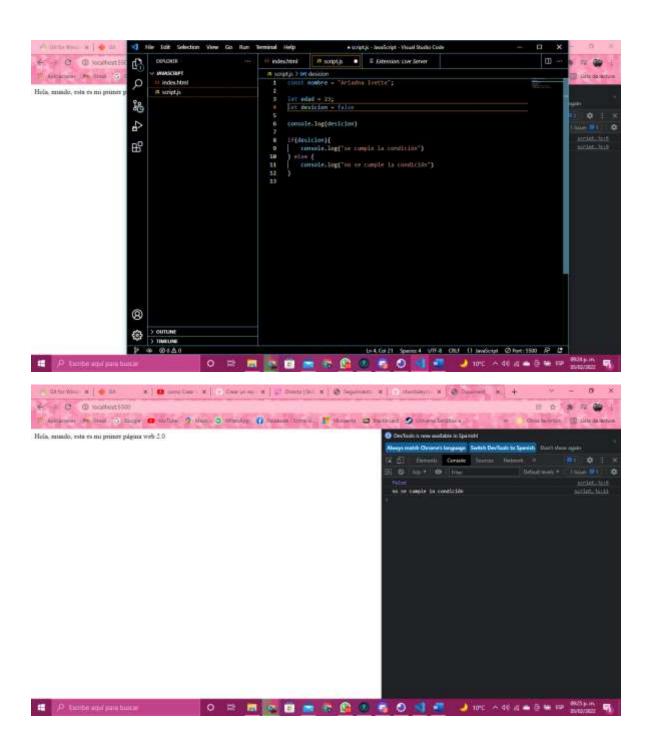

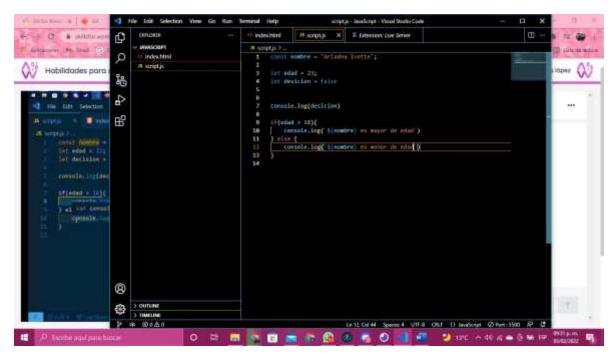

Condicionales

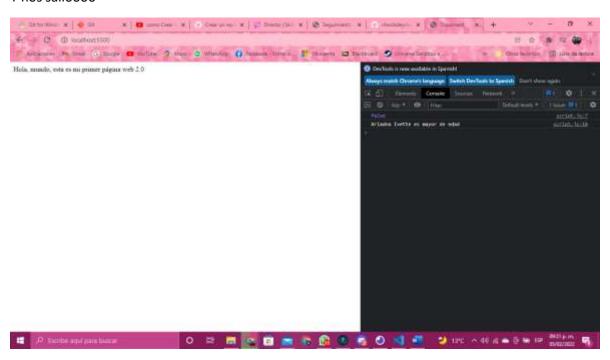

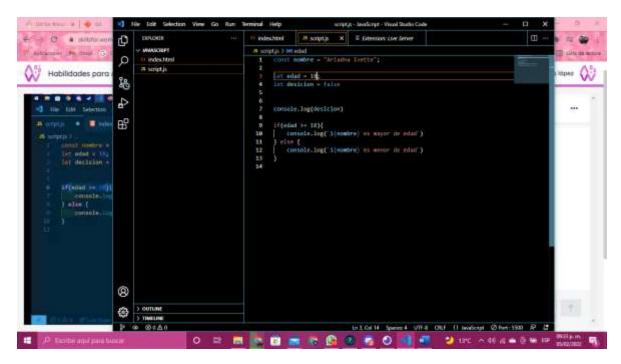

Ahora, le agregamos un else que es por si la primera condición no se cumple

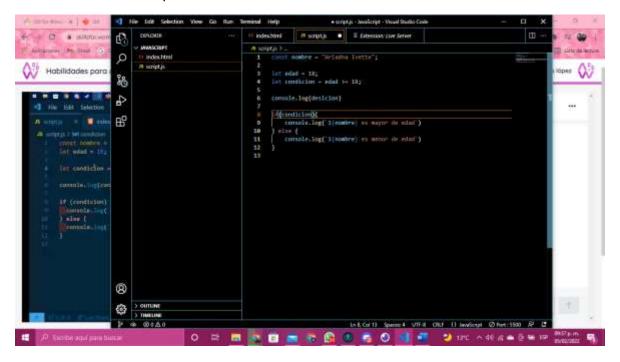

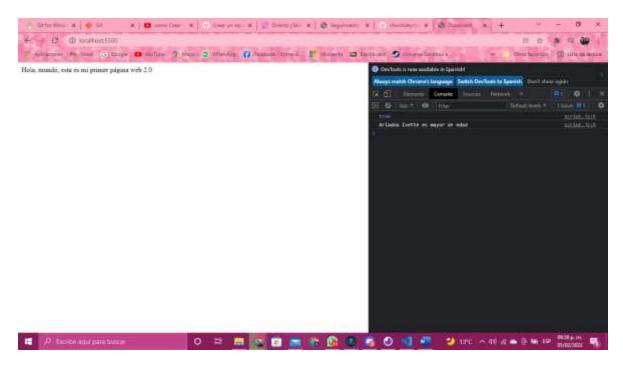

Y nos salióooo

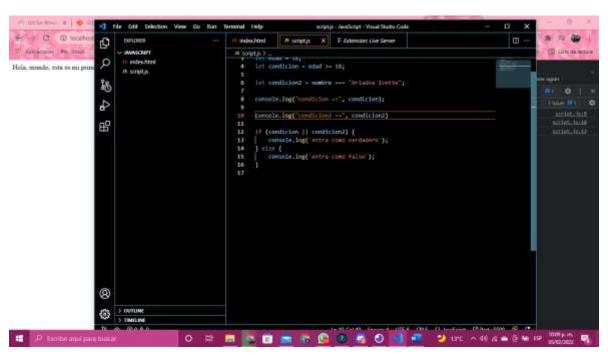

Otra forma de escribirlo y nos sale un boleano

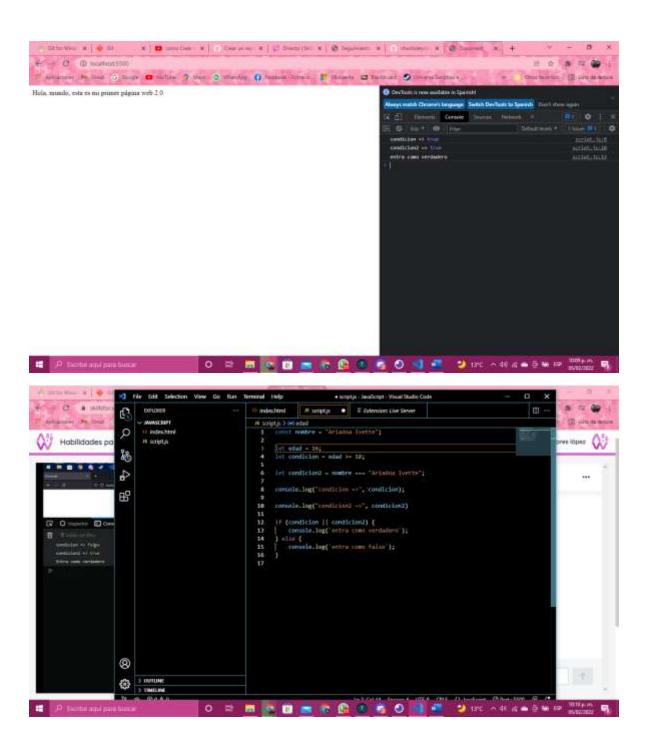

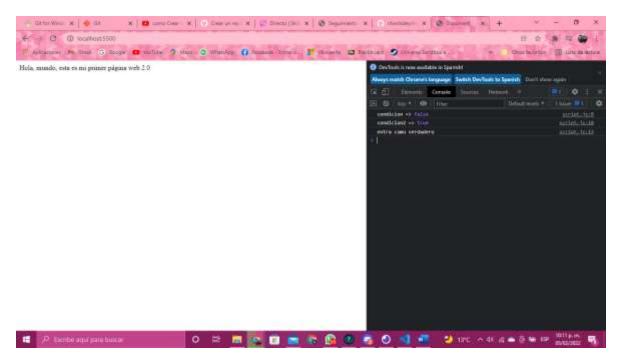

Más condicionales

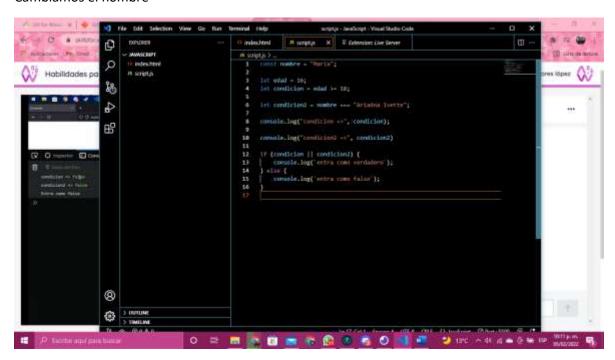

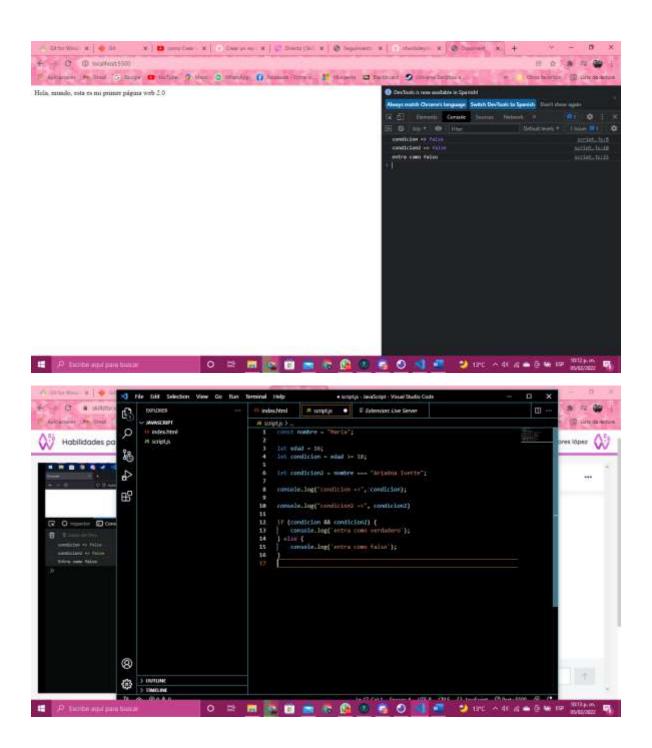

Checamos en consola

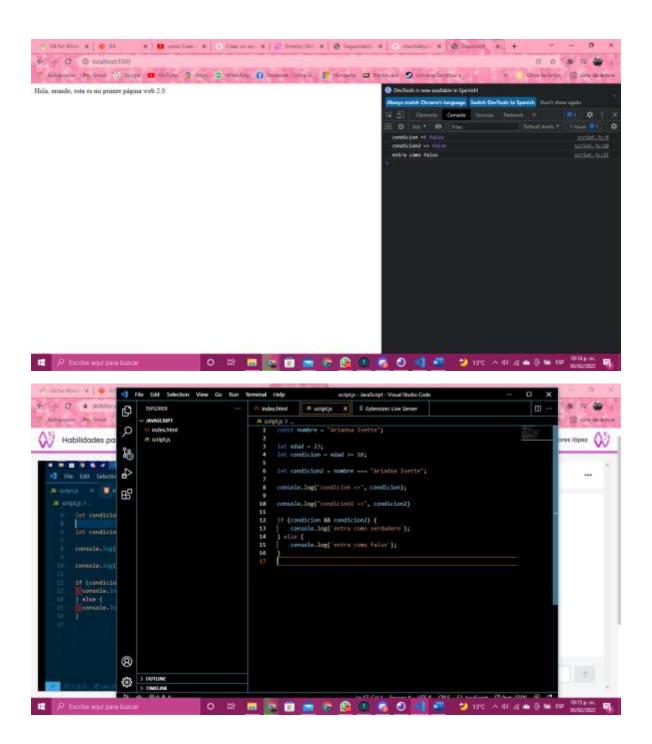

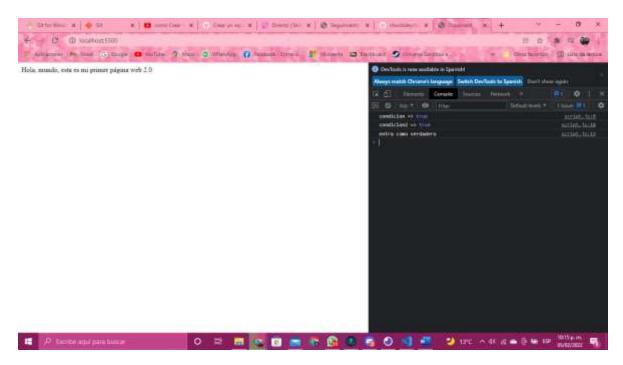

Cambiamos el nombre

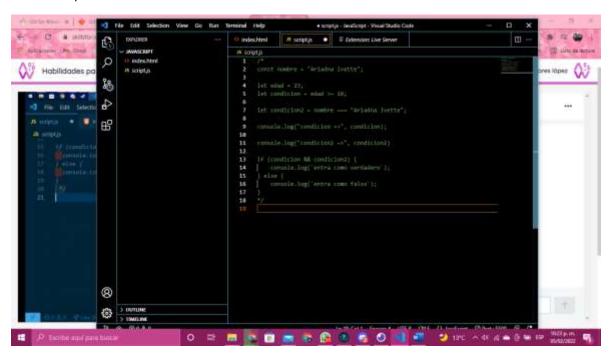

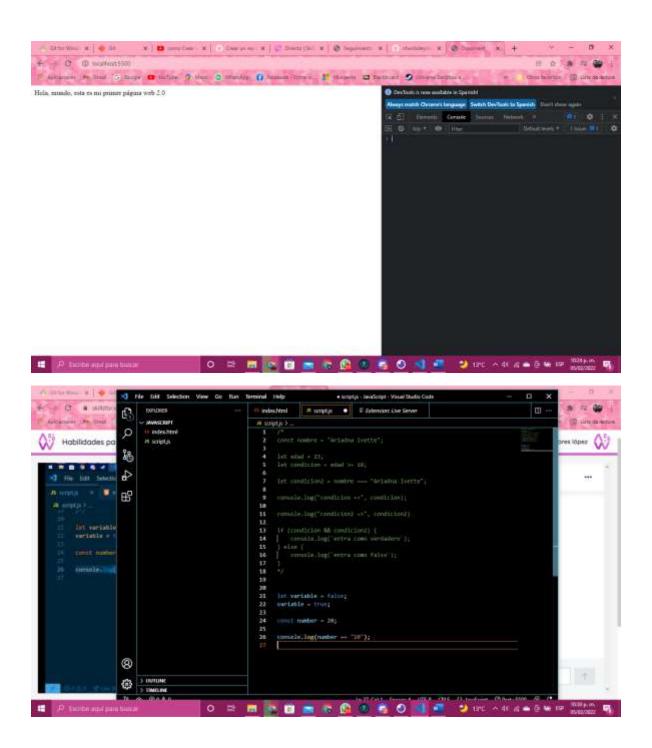

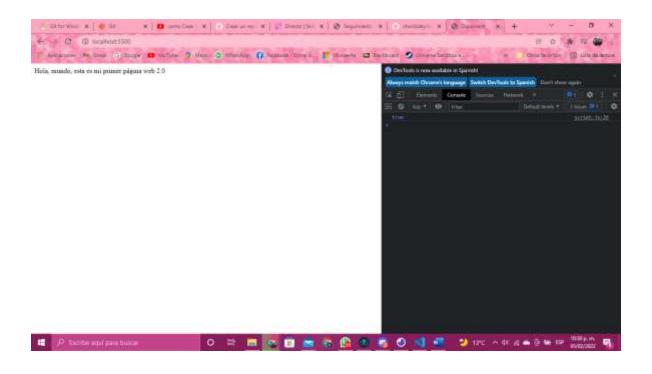

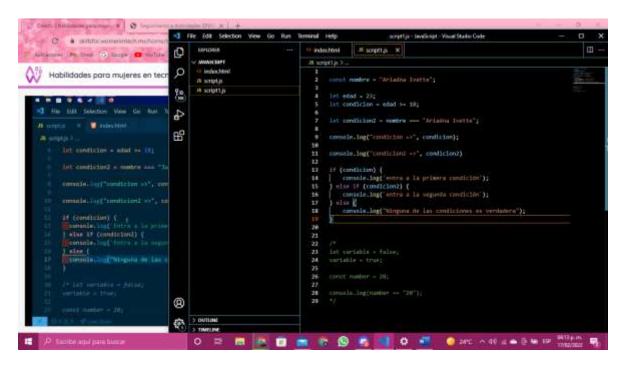

Hacemos que todo sea comentario

Y ya no hay nada

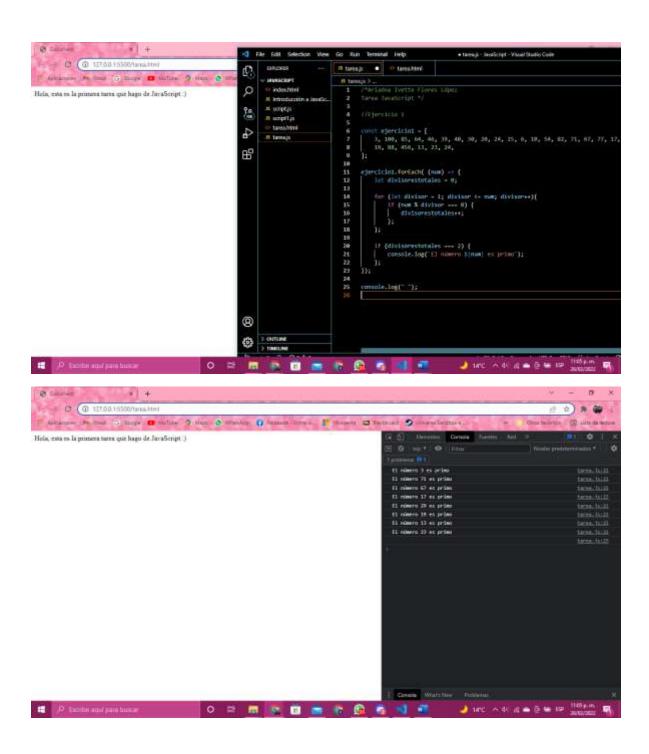

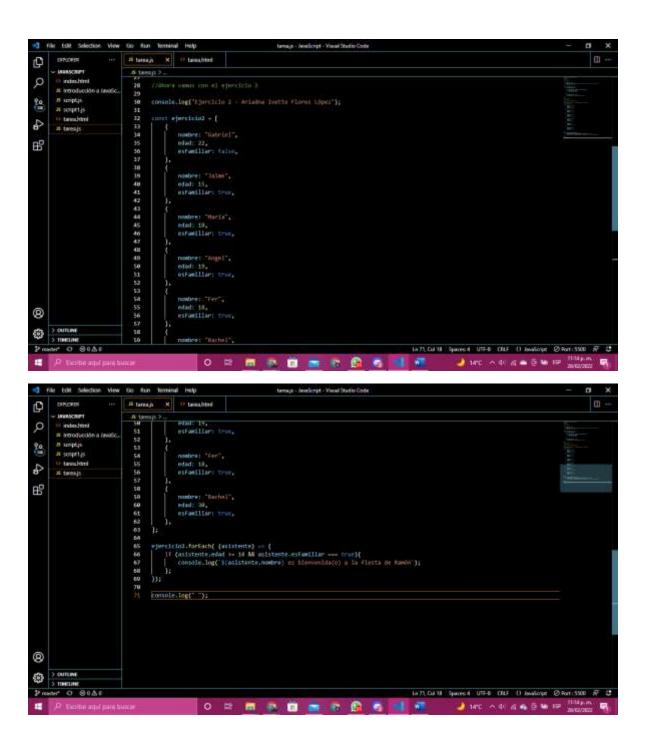

Vamos a pasar a la tarea:

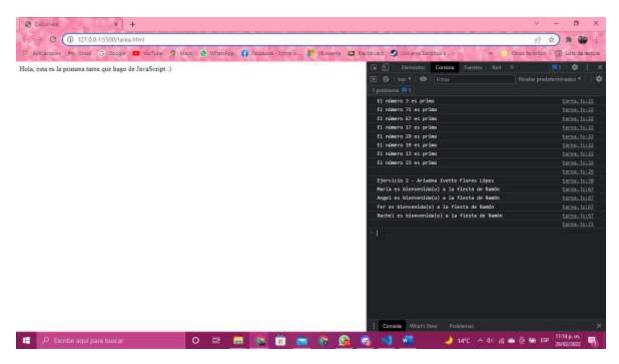

```
### Colf Selection View On Run Nemical Neth Service New On Run Nemical Nemica
```

Ejercicio 1

Ejercicio 2

Ejercicio 3
